Project Overview

A simple, modern shopping experience

What is Shopez?

An e-commerce application that helps users discover products, manage a cart and place orders.

Project Approach

A team-developed application created to apply software development concepts in a practical project.

Target Experience

Easy navigation • Clear product presentation • Smooth shopping workflow

Problem Statement & Objectives

Problem Statement

Customers need a convenient way to browse, compare, select and manage purchases online without unnecessary complexity. Traditional shopping methods can be time-consuming because customers need to visit different stores to find products, compare prices, and make purchasing decisions. There is a need for a **user-friendly online shopping platform** that allows customers to easily browse products, search and filter items, view product details, manage their cart, and place orders.

Objectives

- Build a user-friendly shopping platform
- Support product discovery and cart management
- Implement a clear ordering workflow
- Practice teamwork and software engineering

Key Features

Core functionality of the Shopez application

User Access

Registration, login and profile management

Product Discovery

Browse categories, search and view details

Cart

Add, remove and update cart items

Orders

Checkout and order tracking details

Reviews & Ratings

Customers rate products and share reviews

AI Chatbot

Instant chat support for queries and help

Admin (CRUD)

Full create, read, update and delete control

Responsive UI

Clean, adaptive layout across all devices

System Modules

Organized around the main shopping workflow

Browse → Select → Cart → Checkout → Order

Technology Stack

The MERN-based stack powering Shopez

FRONTEND

React (Vite), HTML5, CSS3, JavaScript

BACKEND

Node.js, Express.js, REST APIs

DATABASE

MongoDB (Atlas)

TOOLS

VS Code, Git & GitHub

DEPLOYMENT

Encryption & Secure Authentication

SECURITY

Password Hashing & Secure Authentication

User Journey

End-to-end shopping flow

Admin/Product Management Flow (Perform crud operations)

Create Product → Add product name, price, description, category & image

Read Product → View product details, images, price & availability

Update Product → Modify product information or replace the product image

Delete Product → Remove unwanted or unavailable products

Bottom line:

Create → Read → Update → Delete → Product Catalogue

Testing & Results

Focus on reliability of the main user journey

Functional Testing

Login, product browsing, cart and order flow

UI Testing

Navigation, layout and responsive behaviour

Bug Fixing

Issues identified during development were corrected

Result

Core e-commerce workflow demonstrated successfully

Future Enhancements

Potential next steps for Shopez

Online payment integration

Planned enhancement

Order tracking & notifications

Planned enhancement

Wishlist & saved items

Planned enhancement

Personalized recommendations

Planned enhancement

Advanced search & filters

Planned enhancement

Analytics & admin dashboard

Planned enhancement

Conclusion

What We Achieved

- Shopez is a user-friendly e-commerce application designed to provide a simple, convenient, and efficient online shopping experience.
- The project helped our team gain practical experience in frontend development, backend integration, database management, and teamwork.
- Shopez demonstrates how modern web technologies can be used to create a responsive, secure, and scalable e-commerce platform.

A strong foundation for a complete online shopping platform.

THANK YOU
